

## **Computer System with Rotatable Display**

### **Abstract of the Disclosure**

5. A computer system comprises a base section and a display mounted about the base with first and second axes of rotation relative to the base, the first axis of rotation being proximate to and substantially parallel to an edge of the display and pivoting the display between pivoted positions, and the second axis of rotation being proximate to and substantially parallel to a centerline of the display regardless of the pivoted position of the display.
